Records receive the following services as identified. A permanent log is created for each volume to record condition, page order, and services/treatments performed. A final quality check references this log sheet.

IM—Archival Imaging (Image Capture, Clean Up, & Zonal Enhancements)

- Capture images at a minimum of 300 dpi at 256 gray levels, ensuring the highest quality for poor contrast and readability. Gray-scale ensures optimum resolution.
- Images accumulate as Group IV bi-tonal images in a standard TIFF or PDF format.
- Kofile's *IMAGE PERFECT* application software uses custom image clean up and enhancements such as deskew, despeckle, character repair, and zonal processing.
- Images are indexed (named) by Book, Volume, and Page and are grouped (stapled) together to form documents.
- Load images into County's existing PropertyInfo records management system. Match images to existing indexes.
- When multiple documents (Deeds, Birth Record, etc.) exist on a single page, images are split so that each document is viewable individually. Custom annotations (directly on the digital image) are offered upon request.
- Effectiveness and minimum legibility is verified through rigorous and systematic quality control. **Each image is certified and sight checked** to ensure there are no missing pages, double feeds, and to account for "A" pages (added to the original).
